

30 April 2018

Dear Warrior Square Surgery,

OpenPrescribing shows your practice's performance on more than 50 measures of prescribing safety, efficacy and cost-effectiveness.

Check the OpenPrescribing website to see how much your practice could save, without increasing risk to patients, by changing some prescription behaviours: [op2.org.uk/f/F81656](https://op2.org.uk/f/F81656)

For example, here's how your practice compares to other practices for Keppra. You could have saved £422 over the last 6 months by prescribing generic levetiracetam instead.

We understand there can be good reasons why a practice might prescribe more or less of something than other practices.

OpenPrescribing is a free, publicly-funded service created by researchers in the University of Oxford to make national prescribing data more useful. You can see the performance of your practice on various prescribing measures, look at any practice or CCG in the country, and do bespoke data searches on any treatment of interest.

Please let us know if you have any feedback or wish to opt-out of this series of communications.

Yours sincerely,

The OpenPrescribing Team  
Nuffield Department of Primary Care Health Sciences, University of Oxford
